PROFILE

Computer Science graduate and software engineer with hands-on experience building full-stack web applications, RESTful APIs, and data-driven software systems across modern software engineering and Agile software development workflows. Completed two software development internships and developed production-oriented projects involving multi-tenant architectures, role-based access control, authentication, automated testing, debugging, version control with Git and GitHub, and cloud deployment, applying problem-solving skills and verbal communication skills throughout development and collaboration.

WORK EXPERIENCE

Software Developer Intern

CPF Türkiye

July 2024 – August 2024
Istanbul, Turkey

- Developed a full-stack, multi-tenant CRM platform using Django and PostgreSQL with organization-level data isolation and role-based access control across 3 user roles: Administrators, Organization Owners, and Agents.
- Built backend workflows across 8 core CRM modules, including lead and agent management, inventory, orders, finance, tasks, notifications, and activity logging; implemented 3 automated reminder workflows for task deadlines, order deliveries, and inactive leads using Django signals and custom management commands.

Software Developer Intern

CPF Türkiye

March 2024 – April 2024
Istanbul, Turkey

- Built a Java Swing desktop application for bidirectional conversion between structured 4-sheet Excel workbooks and a versioned XML format, reducing the need for manual data transformation in internal workflows.
- Implemented Excel and XML processing with Apache POI and JAXB, including 10 documented validation areas covering identifiers, references, dates, currencies, quantities, prices, tax rates, and calculated totals, with structured conversion error handling to support troubleshooting of invalid Excel and XML data.

EDUCATION

B.Sc. in Computer Science

Özyeğin University

2026
Istanbul

TECHNICAL SKILLS

Programming Languages

Java, Python, JavaScript, TypeScript

Frontend Development

React.js, Three.js, HTML5, CSS3, CSS Modules, Tailwind CSS, Bootstrap, Responsive Design, Redux Toolkit, Zustand, TanStack Query, Vite

Testing & QA

Unit, Integration & End-to-End Testing, Jest, Vitest, React Testing Library, JUnit, Django Testing Framework, Supertest, Playwright

Cloud Platforms & Deployment

Cloudflare R2, Cloudflare Pages, Vercel, Render, Neon

AI-Assisted Development

ChatGPT, OpenAI Codex, Claude, Claude Code, Gemini, GitHub Copilot, Cursor; AI-assisted debugging, code review, testing, documentation, and refactoring

Backend Development

Spring Boot, Node.js, Express.js, Django, FastAPI, RESTful APIs, Authentication & Authorization (JWT, OAuth 2.0)

Database & Caching Technologies

SQL, PostgreSQL, MySQL, Redis

Dev Tools

Git, GitHub, Docker, Apache Maven, Postman, OpenAPI/Swagger UI, GitHub Actions (CI/CD)

Core Concepts

Object-Oriented Programming (OOP), Data Structures & Algorithms, MVC Architecture, Software Design Patterns, Asynchronous Programming

PROJECTS

Multi-Tenant CRM Platform | Python, Django, PostgreSQL, Tailwind CSS

- Engineered a full-stack, multi-tenant Django CRM with organization-scoped data access and role-based security controls across 3 user roles: Administrators, Organization Owners, and Agents.
- Connected CRM modules through business workflows that synchronized order and inventory changes, automated stock updates, enforced role-scoped data access, and recorded key actions through audit logging.
- Created 10 custom Django management commands for scheduled notifications, setup, maintenance, and test data; integrated Gmail API and Cloudflare R2 for transactional email and production media storage.
- Validated core CRM workflows with 1,197 passing automated tests using Django's testing framework, reaching ~79% line coverage.

GitHub Repository [↗](#) | **Live Demo** [↗](#)

Swim Center Management Platform | Node.js, Express.js, React, PostgreSQL, Bootstrap

- Built a full-stack swimming pool management system with role-based workflows across 5 user roles: Admin, Member, Doctor, Staff, and Coach.
- Developed 82 API routes covering core swimming-center operations including reservations, health verification, Stripe payments, QR-based facility check-in, and role-specific dashboards across member, staff, medical, and coaching workflows.
- Integrated Google OAuth 2.0, email notifications via the Gmail API, interactive maps with Leaflet, and Cloudflare R2 for production file storage.
- Validated 165 automated tests across backend and frontend unit, integration, and end-to-end workflows using Jest, Supertest, and Playwright.

GitHub Repository [↗](#) | **Live Demo** [↗](#)

LineupNest | React, TypeScript, Zustand, Vite

- Created a responsive football squad builder supporting 50 preset formations across 5–11-player squads, free placement, and player/substitute management across desktop, tablet, and mobile layouts.
- Added extensive appearance customization with 10 pitch/bench patterns, 12 shirt patterns, 7 pitch-surface materials, image customization, captain and player-of-the-match assignment, English/Turkish localization, and high-resolution PNG export.
- Designed a modular React architecture with strict TypeScript, Zustand state management, 30-step undo/history support, and accessible mouse, touch, and keyboard workflows; reduced initial JavaScript gzip size by 28% through deferred loading.
- Achieved ~92% line and ~87% branch coverage across 578 passing Vitest tests, alongside E2E, accessibility, and visual testing across 5 Playwright desktop/mobile profiles using Docker and GitHub Actions CI/CD.

Live Demo [↗](#)

Excel/XML Data Integration Tool | Java, Swing, Apache POI, JAXB, Maven

- Engineered a Java desktop and CLI data integration tool for bidirectional Excel/XML conversion across structured 4-sheet workbooks, sharing conversion services between Swing and command-line workflows.
- Established XSD and cross-record validation with security-hardened XML parsing, structured error reporting, CSV export, Excel template generation, and precise monetary calculations with BigDecimal.
- Applied software design principles through a layered architecture separating domain logic and calculations from Excel/XML adapters, conversion services, CLI, and Swing presentation.
- Verified 103 passing JUnit tests with ~78% application line coverage, alongside Maven packaging and GitHub Actions CI verification.
