Technical Skills

Programming Languages: Java, Python, JavaScript, TypeScript

Core Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms, MVC Architecture, Software Design Patterns, Asynchronous Programming

Frontend Development: React.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Responsive Design, Redux Toolkit, Zustand, TanStack Query

Backend Development: Spring Boot, Node.js, Express.js, Django, FastAPI, RESTful APIs, Authentication & Authorization (JWT, OAuth 2.0)

Testing & QA: Unit, Integration & End-to-End Testing, Jest, Vitest, Django Testing Framework, Supertest, Playwright

Database & Caching Technologies: SQL, PostgreSQL, MySQL, Redis

Cloud Platforms & Deployment: Cloudflare R2, Neon, Render

Dev Tools: Git, GitHub, Docker, Apache Maven, Postman, OpenAPI/Swagger UI, GitHub Actions (CI/CD)

AI-Assisted Development: ChatGPT, Gemini, Cursor, GitHub Copilot, OpenAI Codex; AI-assisted debugging, documentation, code review, and refactoring

Languages

English: Upper-Intermediate (B2)

Turkish: Native

Profile

Computer Science graduate with a strong foundation in Java, Python, TypeScript, JavaScript, data structures and algorithms, and full-stack web development. Experienced in building production-oriented applications and RESTful APIs using React, Node.js, Django, Spring Boot, PostgreSQL, and MySQL. Focused on developing secure, scalable, and data-driven systems with clean, maintainable code and strong version control practices using Git and GitHub.

Education

B.Sc. in Computer Science | 2026
Özyeğin University, Istanbul

Work Experience

Software Developer Intern Jul 2024 - Aug 2024
CPF Türkiye, Istanbul, Turkey

- Developed a full-stack, multi-tenant CRM platform using Django and PostgreSQL, implementing organization-level data isolation and role-based access control for Administrators, Organization Owners, and Agents.
- Built backend workflows for lead and agent management, products and inventory, orders, finance, tasks, notifications, and activity logging; automated stock updates and scheduled email and in-app reminders using Django signals and custom management commands.

Software Developer Intern Mar 2024 - Apr 2024
CPF Türkiye, Istanbul, Turkey

- Built a Java Swing desktop application for bidirectional Excel/XML conversion, reducing the need for manual data transformation in internal workflows.
- Used Apache POI for spreadsheet processing and JAXB for XML serialization/deserialization, including input validation and conversion error handling.

Projects

Multi-Tenant CRM Platform | Python, Django, PostgreSQL, Tailwind CSS

- Description:** Developed a full-stack, multi-tenant CRM platform with Role-Based Access Control (RBAC) for Administrators, Organization Owners, and Agents, supporting secure data access across organization owners, agents, and leads.
- Key Features:** Built core CRM modules for lead and agent management, products and stock, orders, finance reporting, task management, notifications, and activity logs.
- Technical Integration:** Created custom Django Management Commands for automated reminders and backend operations, integrated Gmail API for transactional emails, configured Cloudflare R2 for scalable media storage, and used Django's testing framework to validate core CRM workflows.
- Links:** [GitHub Repository](#) | [Live Demo](#)

Swim Center Management Platform | Node.js, Express.js, React, PostgreSQL, Bootstrap

- Description:** Developed a full-stack swimming pool management system with a multi-role architecture for Admin, Member, Doctor, Staff, and Coach users, designed to automate facility operations, reservations, payments, and health verification workflows.
- Key Features:** Built role-specific dashboards enabling members to purchase packages, make reservations, complete Stripe payments, and generate QR check-ins; doctors to review medical eligibility; admins to manage user verification, pools, sessions, and feedback; staff to verify QR-based check-ins; and coaches to track member swimming ability.
- Technical Integration:** Integrated Google OAuth 2.0, email verification, Gmail API-based notifications, Leaflet/react-leaflet for interactive facility mapping, Cloudflare R2 with Worker Proxy for production file storage, and a testing setup using Jest, Supertest, and Playwright.
